Re: Changes to City's Manual of Specifications and Standard Details

To Engineers and Design Professionals Working in the City of Lynchburg:

On June 1, 2017 the City of Lynchburg Manual of Specifications and Standard Details, December 2016 edition will become effective. The current manual has some significant changes, including a complete re-write of the Low Pressure Force Main Specification and the addition of the Manhole Rehabilitation Specification.

As with previous editions, please be aware that any RWS plans submitted for first review on or after June 1, 2017 must adhere to the new specs.

We encourage everyone to again review the new standards and procedures to become familiar with all the changes. We have attached the list of revisions to this letter, which can also be found on the city's website along with the current edition of the Manual.

Please share this information with anyone else in your organization that may need to know about it.

As always, we appreciate your attention to and incorporation of these new requirements as we all work towards a safer community. Thank you for supporting development in the City of Lynchburg.

Sincerely,

Dee Dee Conner, P.E.
Principal Engineer
